Author Index

Abidat, M.	Exit traverse study of mixed-flow turbines with inlet incidence variation	461–475
Agnew, B.	A hybrid gas turbine cycle (Brayton/Ericsson): an alternative to conventional combined gas and steam turbine power plant	121–131
Anderson, A.	A hybrid gas turbine cycle (Brayton/Ericsson): an alternative to conventional combined gas and steam turbine power plant	121–131
Arts, T.	Experimental and numerical investigation on flow and heat transfer in large-scale, turbine cooling, representative, rib-roughened channels	263–272
Artt, D. W.	Experimental performance evaluation of a 99.0 mm radial inflow nozzled turbine with different stator throat areas	477–488
Baines, N. C.	Exit traverse study of mixed-flow turbines with inlet incidence variation	461–475
Bevc, F.	Advances in solid oxide fuel cells and integrated power plants	359–366
Bidini, G.	Simulation of hydraulic power plant transients using neural networks	393–398
Bidini, G.	Thermodynamic analysis of hydraulic air compressor–gas turbine power plants	429–437
Brown, A.	The influences of turbine blade mean temperature and component efficiencies on coolant optimization in the gas turbine	181–190
Çakan, M.	Experimental and numerical investigation on flow and heat transfer in large-scale, turbine cooling, representative, rib-roughened channels	263–272
Chand, P.	A correlation to predict the performance characteristics of centrifugal pumps handling slurries	147–157
Cheesewright, R.	Step response tests on turbine flowmeters in liquid flows	321–330
Chen, H.	Exit traverse study of mixed-flow turbines with inlet incidence variation	461–475
Chung, M. K.	An optimum set of loss models for performance prediction of centrifugal compressors	331–338
Clark, C.	Step response tests on turbine flowmeters in liquid flows	321–330
Collins, R.	Sulphur removal from flue gases in the utility sector: practicalities and economies	11–26
Cooper, J. R.	Sulphur removal from flue gases in the utility sector: practicalities and economies	11–26
Curran, R.	The energy conversion performance of several types of Wells turbine designs	133–145
Curran, R.	Design synthesis of oscillating water column wave energy converters: performance matching	489–505
Demeulenaere, A.	A two-dimensional Navier–Stokes inverse solver for compressor and turbine blade design	299–307
Dominy, R. G.	Diffusion rate influences on inter-turbine diffusers	235–242
Duden, A.	Influence of taper, Reynolds number and Mach number on the secondary flow field of a highly loaded turbine cascade	309–320
Dunham, J.	Modelling of spanwise mixing in compressor through-flow computations	243–251
Fernandez, D.	Experimental and numerical investigation on flow and heat transfer in large-scale, turbine cooling, representative, rib-roughened channels	263–272
Finnis, M.	The influences of turbine blade mean temperature and component efficiencies on coolant optimization in the gas turbine	181–190
Fisher, B. E. A.	Predicting cooling tower plume dispersion	291–297
Fottner, L.	Influence of taper, Reynolds number and Mach number on the secondary flow field of a highly loaded turbine cascade	309–320
Frost, T. H.	A hybrid gas turbine cycle (Brayton/Ericsson): an alternative to conventional combined gas and steam turbine power plant	121–131
Fry, M. R.	Design of a prototype fuel cell/composite cycle power station	171–180
Gardner, F. J.	Thermodynamic processes in solid oxide and other fuel cells	367–380
Gato, L. M. C.	The energy conversion performance of several types of Wells turbine designs	133–145
Grimaldi, C. N.	Thermodynamic analysis of hydraulic air compressor–gas turbine power plants	429–437
